RESEARCH GRANT APPLICATIONS

Please note that The Ehlers-Danlos Society offers a maximum of 5% uplift of the value of the grant for indirect costs.

Research Grants

The Ehlers-Danlos Society aspires to offer grants annually, with calls for clinical research proposals early in the year and for basic science later in the year. We will also offer grants of varying value to reflect the different nature of researcher requirements, including microgrants. Examples of our recent funding are available to see [here \(https://www.ehlers-danlos.com/funded-research\)](https://www.ehlers-danlos.com/funded-research)

Researchers who wish to apply for open access for research outputs can apply [here \(https://www.ehlers-danlos.com/2022-open-access-publication-grant-application/\)](https://www.ehlers-danlos.com/2022-open-access-publication-grant-application/).

2022 - \$200K Rarer Types Grant

The Ehlers-Danlos Society is pleased to announce a round of grants for research into the rarer types of the Ehlers-Danlos syndromes (EDS) from an available fund of \$200K. To be eligible for funding, research must be looking into one or more of the following types of EDS: Arthrochalasia EDS, Brittle Cornea Syndrome, Cardiac-Valvular EDS, Classical EDS, Classic-Like EDS, Dermatosparaxis EDS, Kyphoscoliotic EDS, Musculocontractural EDS, Myopathic EDS, Peridontal EDS, Spondylodysplastic EDS, and Vascular EDS.

The purpose of this funding is to determine aspects of the rarer types that can be further investigated to improve the management and outcomes. The following areas have been prioritized as areas that need attention in research:

- Genotype and Phenotype – The identification of specific genotype and phenotype groups and subsequent prevalence studies.
- Time to Diagnosis Reduction – Exploration of reducing the time it takes an individual to receive a diagnosis and earlier counseling.
- Centers and Networks of Excellence – The availability of proper centers that have the appropriate resources to assist patients, as well as proper pathways to follow.
- Therapies and Management – Elucidation of mechanisms and therapies that can target these mechanisms of symptoms such as pain and fatigue, as well as the investigation of the mechanism behind comorbidities.

This grant round will adhere to the following timeline:

- Announcement Date – July 1, 2022
- Letter of Intent Submission Deadline – July 30, 2022
- Full Application Deadline – August 15, 2022

· Notification to Applicants – September 14 to September 15, 2022

A Letter of Intent must be submitted before completing the full grant application.

2021 - \$1 Million Molecular Studies in hEDS and HSD Grant

2021 - \$400K Basic Science Research Major Grants

2020 - Fall Microgrants

2020 - \$400K Clinical Research Major Grants

2020 - Spring Microgrants
